MIFT
Malaysian Institute of Food Technology

Reimagining Food Industry with AI.

Practical AI insights for the future of food, operations, and innovation.

Featuring

Llewellan Vance

Innovation & Strategy Lead

AI-native strategist with 18+ years turning complexity into market-moving solutions. Formerly led Huawei Singapore's Applied Intelligence Office and now builds AI-led innovation ecosystems across ASEAN and beyond.

8 December 2026

9.00am-1.00pm
Registration from 8:45am

MIFT Office, Subang Jaya

Limited to 15 pax only

MIFT member: RM88
Non-MIFT member: RM118

Every food operation has a problem worth solving that nobody has had time to define properly.
Whether it's waste, yield, shelf life, supply chain visibility or food safety compliance, this session shows you where AI actually fits. Using a structured design thinking approach, you will sharpen a real challenge, look at what your operation already owns, and rank the AI use cases that could address it. You leave with the groundwork to make the case internally.

Who should attend

Food manufacturers, processors, F&B operators, supply chain and logistics leads, quality and food safety managers, digital transformation and IT leaders, and plant and operations heads.

What you will take away

- **A clearly defined problem from your own operation**
- **A shortlist of AI use cases, ranked by value and feasibility**
- **A clear view of the strongest idea and how to take it forward**
